

2026-2030 BEYOND TODAY

Leading Digital Transformation
to Impact Behaviors

WELCOME

The strategies ahead aim to establish a foundation for developing peak performance, improving sustainable productivity and catalyzing growth and competitiveness. This is achieved by enhancing people's experiences to deliver personalized, innovative experiences that delight the end-users. Organizations now value leaders who manage uncertainty with discipline and agility. Transformation is central to adapting quickly, while growth relies on bold strategies and strong execution. The most effective leaders blend digital innovation and human talent to build resilient organizations and drive sustainable value. Finally, they boost productivity using a few different, but strategic tactics. Empower the workplace with different perspectives to drive efficiency, innovation, and accelerate process optimization. For a comprehensive analysis (existing-conditions) and actionable tactics (the Future-Picture), the next pages cover what every person, leader or team member, must be focused on.

LEADING GROWTH THROUGH TRANSFORMATION

As we start this segment in the series, **“Leading Growth Through Transformation,”** we carefully think about the next-level. The “next-level” means something different to every business owner and for most, it’s a serious struggle to describe what the “next-level” would even be. For us, it means building and deploying the next generation of leadership (Leadership 2.0), operations, processes, and technology that ALL people, even the customer, can purposefully attach to regardless of circumstance or level of uncertainty, while avoiding the “Danger Zone of Leadership (DZL).” This is a point where the norms are done, day-in and day-out, to achieve expected outcomes and results. It takes a lot to do different actions to get different results, but this is what the next-level is all about. Sounds like a lot or unlikely right? It’s NOT! As Peter Drucker wisely said: “The leader of the past was someone who knew how to tell. The future leader will be someone who knows how to ask.” Ask. Don’t make major missteps that turn into mistakes later in the organization’s approach, while behaving with an ambitious—and expensive—vision of the Future-Picture for intelligent growth.

Leading through transformation means people must impact all aspects of the organization; the “current (the future), the gaps (the Event Horizon) and the desired outcome (the Future-Picture).” Momentum, inertia, and work happen more by happenstance than expected. If anyone tells you something else, they’re wrong. The contract feels important. Importance often doesn’t feel urgent. Yes, you plan on winning to start the work, but it’s not the way you planned it; let me explain. “Protect your time for non-urgent, but important work.” Everything doesn’t scream for your attention, but they do build your Future-Picture. Delegate anything that doesn’t need you like approvals, scheduling, or recurring updates. If someone else can do it 70%+ as well, hand it off. Delete time wasters without guilt (meetings with no agenda, calls just to stay in the loop, or micromanaging what your leaders can own).

LEADING GROWTH THROUGH TRANSFORMATION

Every second and minute you reclaim is one you can reinvest in progress and growth. Do what only you can do and execute it (time) very well; strategically and flawlessly. It must define your ability to reinvent the moment, yourself, and others (mindset) to create a rare and brilliant skill of time, progress, and work. Adaptability is the key advantage amid AI advances, changing customer needs, and operational disruptions that move progress; it takes a genius to enable it—be that genius. Exceptionally great professionals don't just manage time and work. They protect it, they prioritize it, and they multiply it drastically; the Future-Picture is always aligned with the work they do. Letting go of cherished ideas in the face of real progress is a valuable skill, as improvement comes only through change.

Re-condition progress and lead effectively through growth transformation to achieve the next-level for you, your team, and your organization. The re-conditioning process takes effort, but it's well worth it in the end. Remember, trends shift and consumer sentiment evolves, but your business must consistently adapt and innovate. Achieving progress requires Leadership 2.0 led from you to go beyond today and lead through growth transformation to get better or improved (different) results. Tap into a trusted team with proven expertise and the skills to use advanced technology for helping your organization tackle complex challenges that awaits if you must. But get there. One of us can't make progress like all of us.

LEADERSHIP 2.0 TRAITS FOR RESILIENCY...

As I move into the next segment, **“Leadership 2.0 Traits for Resiliency Beyond 2025,”** resilient organizations are defined by leaders who embodied specific traits that enabled them to navigate challenges effectively and foster a culture of adaptability and growth. It’s smart to look at successful traits, but leaders must ask, “how can operational leaders turn disruption into an opportunity to build a more resilient architecture?” This question resonates even more after the global IT outage during the pandemic of 2020. Crises exposed outdated practices and long-overlooked vulnerabilities, forcing industries to rethink traditional approaches. We unpack and explore how teams can move beyond reactive patching and build an operational and security architecture designed for resilience from the ground up. The time for change isn’t when the next crisis hits—it’s now. But to start, the following traits are essential and must be learned by all stakeholders:

Key Leadership Traits for Resilience

- Adaptability and systems mindset.
- Leaders with a systems mindset are adept at identifying patterns and connections, allowing them to see opportunities where others see problems.
- They are capable of setting a direction without having a clear destination, which is crucial in uncertain environments.
- Adaptable leaders engage in listening tours and use feedback mechanisms to understand employee needs and adapt strategies accordingly.

Empowerment and Learning from Crises

- Adaptable leaders foster organizational agility and empower teams, setting the tone for resilience.
- They focus on learning from crises, encouraging individuals and teams to find lessons in challenging situations.

LEADERSHIP 2.0 TRAITS FOR RESILIENCY...

- These leaders acknowledge their limitations and continuously coach others to improve and adapt.

Cultural and Behavioral Traits

- Cultural DNA and cohesive culture.
- Leaders define a cultural DNA or behavioral code that guides decision-making and prioritization.
- A cohesive culture is emphasized, where resilience is not just about recovery but about growth and capturing opportunities.

Resilience and Optimism

- Resilience and optimism are crucial traits for leaders, fostering a learning culture where failures are seen as opportunities.
- Leaders like Satya Nadella exemplify these traits by promoting a "learn-it-all" attitude and transparency.

Additional Traits for Effective Leadership

Humility and Curiosity

- Effective leaders exhibit humility and a willingness to learn from mistakes, fostering a culture of continuous learning.
- They are not afraid to be vulnerable and are open to new ideas and perspectives.

Decisiveness and Humor

- Leaders who act decisively and commit to their decisions contribute significantly to organizational health.
- Humor is used strategically to bond teams, defuse stress, and unlock creativity, making leaders more motivating and inspiring.

LEADERSHIP 2.0 TRAITS FOR RESILIENCY...

Tenacity and Agility

- CEOs play a critical role in developing adaptive workforces by identifying and nurturing traits like tenacity and agility.
- These traits are integrated into talent management processes to ensure resilience in times of disruption.

Conclusion

In summary, the most resilient organizations in 2025 were led by individuals who demonstrated adaptability, empowerment, cultural cohesion, and a commitment to learning and growth. These leaders fostered environments where resilience was not just about bouncing back but also about thriving amid challenges. This strategy is based solely on the insights published by our Skipper at the Bison Group® team using the AxeusSM Platform at the TriplicitySM Solutions.

The AxeusSM Platform solves business, operational challenges and problems using our “Outcome Generator” to scale impact, accelerate innovation, and deliver measurable results that moves to the next-level—without spending more time, money or resources. It increases productivity and builds personal continuity for you to become a better person!

MOST CRITICAL GROWTH SKILLS LEADERS NEED TODAY

As I move into the next segment, **“The Most Critical Growth Skills Leaders Need Today,”** soft skills are more critical than any time before. High-performing associates, leaders, and teams recognize that sustainable achievement is contingent upon developing leaders who possess the vision to drive and sustain strategic advantage. Advancing one’s career necessitates both expertise and assurance to actively contribute to organizational progress. The “Beyond Tomorrow” initiative is designed to enhance participant’s understanding of essential business functions and expand their perspective on contemporary market dynamics. Participants will further develop both technical and interpersonal competencies, while refining advanced leadership approaches to achieve meaningful outcomes. In 2025, growth leaders must prioritize certain soft skills to effectively drive organizational success and navigate the evolving business landscape using the following key soft skills that AI cannot:

Communication—The Heptagon FrameworkSM

- The Heptagon FrameworkSM is all about making communication better between parties using different frameworks to improve habitual listening and reacting skills that increases Emotional Intelligence (EQ). It understands and manages one’s own emotions, as well as the emotions of others and plays a crucial role in various aspects throughout life and across the organization to shape perceptions among stakeholders.
- They are 80% more likely than their peers to frequently communicate growth successes, using all facets of the comprehensive communication plans that target all stakeholders.
- Effective communication involves going beyond traditional channels and using media and the internet to convey wins and aspirations to the outside world.

MOST CRITICAL GROWTH SKILLS LEADERS NEED TODAY

Curiosity and Learning Agility

- Curiosity is essential for understanding client needs and driving growth through consultative selling.
- Learning agility is crucial, as it is more important to be able to learn new things than to rely solely on existing knowledge, especially in times of disruption.

Self-awareness and Personal Growth

- Leaders need to balance hard skills with soft skills such as self-awareness, humility, vulnerability, resilience, confidence, and balance.
- Understanding personal shortcomings and working on self-improvement is vital for effective leadership.

Collaboration and Making Others Better-Best

- Leaders should focus on soft skills that enhance collaboration and make others better, rather than on individualistic traits.
- The ability to help others collaborate effectively is crucial in the context of evolving roles influenced by the AxeusSM Platform.

Conclusion

These insights highlight the importance of communication, curiosity, learning agility, self-awareness, and collaboration as critical soft skills for growth leaders beyond 2025. This strategy is based solely on the insights published by me and the team at the Bison Group® using our AxeusSM Platform at the TriplicitySM Solutions.

WHAT MAKES ORGANIZATIONS DISRUPTIVE IN THE ERA OF AI?

As I journey into one of the more critical segments in the series, **“What Makes Organizations Disruptive in the Era of AI?”** this question relates to the collaboration of people and technology. The quote “Nothing can be gained without losing, even heaven demands death” highlights that all progress and achievement, even the most desirable outcomes like reaching heaven, require sacrifice and letting go of something else. It emphasizes that change and growth inevitably involve loss, and that some losses are necessary for achieving a desired end state. Ask yourself, “which frontier technologies matter most for the organization?” “Are you investing the organization’s resources into your people’s platforms?”

Your organization’s specific needs, culture and challenges are central to your work. They’re focused on a practical, hands-on partnership that delivers sustainable, inclusive growth. You want to ensure the transformation sticks, working with your people to reach their full potential with hands-on coaching and actionable learning. But you must first ask yourself “what does the next level really mean for the organization to stay relevant in the next era?” This question must relate to continued growth and solving the operational challenges to meet the aspirations for continuous transformation. In comes the **FAST**-Galloping GhostSM. “Are you moving the organization toward cutting-edge engineering and the future of mobility?” Mobility technologies include autonomous vehicles; electric vehicles; drones; urban air mobility solutions, such as electric vertical takeoff and landing aircraft; and micromobility, such as e-scooters and e-bikes. These technologies have an objective of improving the efficiency, safety, and sustainability of transportation systems. “How about the future of energy and sustainability technologies?” Energy and sustainability technologies encompass a broad spectrum of innovations aimed at transforming the global energy landscape toward a more sustainable and resilient future.

WHAT MAKES ORGANIZATIONS DISRUPTIVE IN THE ERA OF AI?

This includes the spectrum of technologies transforming the global energy value chain, particularly focusing on clean electrons, electrification, and clean molecules. To describe the state of each trend, we introduced innovations based on patents, research publications, news and web searches. We also estimated the level of equity investments in relevant technologies and their level of adoption by organizations. We also adopted some of them to take our organization to the next-level (our 4 key tenets of the Strategy of ICE: TriplicitySM Solutions). There are more but I only focused on a few. From the rise of robotics and autonomous systems to the imperative for responsible AI innovations, this year's (2025) technological developments underscore a future where technology is more adaptive, collaborative, and integral to solving global problems. "Have you considered the latest technological breakthroughs, talent trends, use cases, and their potential impact on the organization?"

The Behavior of Disruption

In a nonlinear, accelerated, volatile and interconnected world, understanding megatrends is key for leaders to redefine success. Navigating these challenges demands new approaches to transformation. A large number of leaders and CEOs agree they need to rethink their approach to transformation because of volatility, interconnectedness and the increased speed and scale of tech disruption, but about two-thirds have yet to make these changes. VUCA hasn't gone away, but it's insufficient to understand the world we now inhabit. The events of today's operating environment are defined more by traits such as nonlinearity and interconnectedness, which create new challenges, imperatives and opportunities for business leaders.

WHAT MAKES ORGANIZATIONS DISRUPTIVE IN THE ERA OF AI?

Our team explains that we've shifted from facing just technological disruption to **navigating complex, interconnected disruptions** today. Issues like AI, climate change, geopolitics, and societal changes are now occurring simultaneously. With these forces accelerating and blending together, business leaders encounter both new challenges and opportunities. The **NAVCID world** is not just VUCA by another name; it's a VUCA-plus environment, defined by four traits:

The First Being “Nonlinear”

More than ever, leaders are operating in a nonlinear world, in which change doesn't happen at a constant rate. For instance, technology S-curves can precipitate tipping points, in which technologies suddenly transition from gradual improvement to huge advances, catching leaders and organizations by surprise—as seen with the launch of ChatGPT3. While technology S-curves date back to at least the mid-1970s, in today's environment of accelerated change, they are steeper—bringing more frequent tipping points. Our brains did not evolve to understand nonlinearity, and so we try to create linearity in a world of nonlinear transformation.

The Second Being “Acceleration”

Change is happening faster than ever. AI is evolving rapidly, with new features and tools launched frequently. Technologies like robotics, battery innovations, and renewables such as wind and solar are also improving quickly. Climate change is speeding up, causing more frequent and costly disasters and faster ice loss. Geopolitical shifts now occur in days instead of years, from swift tariff changes to a fundamentally altered global landscape.

WHAT MAKES ORGANIZATIONS DISRUPTIVE IN THE ERA OF AI?

The Third Being “Volatility”

Tariffs not only reflect how quickly things are changing but also highlight the uncertainty of today's dynamic environment. Research points out that shifting political landscapes and growing polarization are making policy swings between elections more common. For example, the wave of anti-incumbency during 2024's “global elections super cycle” led to substantial policy changes across several nations, creating a challenging landscape for both business and government leaders. To navigate this complexity, government officials must actively work to demonstrate improvements in services and living standards—using data, digital infrastructure, and public-private partnerships to strengthen resilience, raise living standards, and encourage innovation.

Demographic shifts are also adding to volatility. Younger generations, empowered by social media and shorter supply chains, have accelerated consumer trends and sparked microtrends that may last only weeks. Migration and immigration, driven by factors like climate change, political unrest, or economic opportunity, can further intensify political instability.

At the same time, rapid advances in technology—such as new forms of AI—are bringing about breakthroughs and critical changes that force organizations to rethink their strategies quickly. The advent of agentic AI, for instance, has prompted strategic pivots: Salesforce introduced its “Agentforce” platform, and Intel shifted from making chips solely for itself to manufacturing for other companies like NVIDIA. Such volatility affects enterprise transformation efforts, requiring leaders to adopt methods that allow them to respond swiftly to evolving circumstances and allocate resources efficiently amid ongoing uncertainty.

WHAT MAKES ORGANIZATIONS DISRUPTIVE IN THE ERA OF AI?

The Fourth Being “Interconnectivity”

In today's NAVCID world, interconnected trends mean that external shocks can create chains of unexpected consequences. Recent geopolitical events like COVID-19 and wars have shown how disruptions can ripple through economies, impacting everything from used car sales to supply chains.

Similar knock-on effects may arise from emerging trends; for example, autonomous vehicles might decrease energy drink sales due to fewer truck drivers, and electric vehicles could increase demand for environmental remediation as repair shops close.

Conclusion

These complex traits present new risks for business operations: distant events can quickly lead to major disruptions. To succeed, leaders and organizations should combine strategic planning within the “current (the future), the gaps (the Event Horizon) and the desired outcome (the Future-Picture)” with agile transformation to adapt swiftly and confidently—in the near term. Second, they should have “No Regrets” when developing and deploying longer, sufficient visions to chart a long-term course through NAVCID's choppy waters. But to thrive in the near term, you simultaneously need to transform and reimagine your enterprise to be more AGILE and flexible. This involves transforming business models, operating models, risk management and, ultimately, transforming itself.

This takes enormous effort and a lot of questions from decision-makers in the environment. In a world that's changed, and of change, we need to rethink old approaches to succeed. Using the “Beyond Today” initiative can give you the confidence to face the NAVCID world decisively and shape your Future-Picture with success.

HEALTHY PEOPLE ACROSS THE ENVIRONMENT

As I journey into the healthy people segment of the initiative, **“Healthy People Across the Environment,”** people are one health scare away from causing chaos in the environment. We work with organizations to strengthen the workplace culture, develop resilient leaders, and enhance engagement, retention, and wellbeing with associates. Associates can use this platform in private (HIPPA Laws) and on their phones.

Our ReVyveSM technology delivers personalized plans and recovery plans, mainly for stroke and mental health patients, powered by AI. The teams support men and women on their journey to restore their strength, revitalize their confidence, and rebuild their independence—one milestone at a time. ReVyveSM is also used to overcome mental health issues that require personalized treatment and solutions for people to live healthy lifestyles.

Using 3 easy steps to unlock valuable insights and solutions, ReVyveSM deliver successful plans to achieve recovery outcomes and results. Start getting more Self-Love (increase your joy), Self-Care (lighten your load), and Self-Growth (skills to help you learn) and STOP chasing everything else. Personal health isn't about chasing every opportunity, ONLY the ones that matter most. And our training takes a personalized approach to associate growth and extends to support them throughout their journey within the organization using one of our offerings:

- **The Heptagon FrameworkSM:** the ability to understand and manage one's own emotions, as well as the emotions of others, through effective communications and various aspects across the organization (clear communications).
- **RSO-ability:** Recovery Focus, Your Situation, and Your Objectives to establish work processes, architectural design practices, and employment benefits designs to support healthy behaviors for associates and their families.

HEALTHY PEOPLE ACROSS THE ENVIRONMENT

Using 3 actions—Recovery Focus, Your Situation, and Your Objectives—people can build their plan or choose the recovery domain that matters most to them based on what they're actually experiencing:

- Mobility & Physical Function: walking, balance, strength, condition.
- Speech & Communication: speaking, understanding, reading, writing.
- Emotional Wellbeing: mood, anxiety, adjustment, coping.
- Social Reintegration: relationships, community, activities.
- Cognitive & Memory: thinking, memory, attention, problem-solving.
- Daily Living Activities: self-care, household tasks, independence.
- Return to Work: job skills, workplace accommodations.
- Mental Health: empowering patients, personalized treatment & solutions.

Every step forward is a victory! Your journey starts with your high-quality dashboard to unpack your objectives for more Self-Love, Self-Care, and Self-Growth. Here's how ReVyveSM Works:

1. Recovery Focus: choose the recovery that matters most based on what they're actually experiencing.
2. Your Situation: honestly identify and tell us about your situation without leaving anything out.
3. Your Objectives: get your personalized created recovery plan just for you with maintenance, etc.

My Delivery Hub: get your PDF version of the recovery plan with a simple push of a button in the Delivery Hub with recovery milestones, progress, and a daily reminder. Visit www.revyve.app to see for yourself.

WHY IT ALL MATTERS?

Our “Beyond Today: Leading Tomorrow with Digital Transformation” initiative streamlines your ideas to give you less to manage and more time to get ready for what’s coming around the corner. Streamline ideas. Manage less. And be ready for what’s waiting to develop opportunity. You see, business transformation is often viewed as essential, though few welcome its disruptive effects. Organizations pursue full transformation—a strategic overhaul across people, processes, and performance (The Productivity ExchangeSM)—to respond to market shifts, regulatory changes, or improve efficiency and pivotal growth. Ultimately, transformation aims to boost resilience, agility, competitiveness, and sustainability.

Three Main Reasons for Operational Transformation in Business

According to our research, organizations undertake significant business transformation initiatives for three leading reasons: increased profitability, improved Customer-facing Experiences (CX), and increased market share—for full and complete satisfaction. Teams and organizations pursue transformation by streamlining operations, cutting costs, and using technology to boost efficiency and profit. They adopt customer-centric strategies to improve satisfaction and loyalty, which supports reputation and revenue growth. By entering new markets and leveraging data insights, firms identify opportunities, target unmet needs, and stand out with innovative products.

Protagonistic Versus Reactive Transformation

In general, each transformation initiative can be categorized as either Protagonistic or Reactive.

WHY IT ALL MATTERS?

Protagonistic Transformation is when organizations aggressively initiate change to capitalize on opportunities (favorable situations), innovation (a new improved product, service or process) or Disruptive Differentiation (solutions that address your unique challenges) such as expanding into markets before saturation occurs in a continuous transformation (evolving) home environment.

Reactive transformation is a response to emerging threats or challenges, like overhauling security after a data breach. Regardless of motive, effective business transformation relies on strong strategic planning, implementation, and continuous improvement. Adaptability and foresight are essential for organizations to stay competitive in today's fast-changing environment.

Learn about the challenges, problems, people and strategies for organizational transformation in our initiative, "Beyond Today," created by the team at the Bison Group® using our AxeusSM Platform at the TriplicitySM Solutions.

ONE MORE THING: MY BONUS TO YOU!

What is Innovation in Business? Types, Tips and Ideas

Innovation in business encompasses much more than the creation of new products. It involves reimagining processes, enhancing Customer-facing Experiences (CX), and developing entirely new markets. Organizations that neglect innovation risk declining relevance and market share, whereas those that adopt creative problem-solving are better positioned to leverage emerging opportunities and establish enduring competitive advantages. In today's dynamic marketplace, innovation is fundamental to maintaining competitiveness or establish strategic advantages. Leaders across industries must consistently seek out innovative approaches as societal demands and priorities shift, and they will. This onus segment provides a comprehensive overview of what innovation means within a business context, outlines its main types, and presents practical strategies for fostering innovation within your organization.

Defining Innovation in Business

Innovation in business refers to the creation of value through novel solutions addressing problems or evolving customer requirements. Unlike incremental improvements or efficiency enhancements, true innovation entails the development of new products, services, business models, or methodologies that are both inventive and practical. While creativity generates original ideas, innovation transforms these concepts into actionable solutions that drive organizational growth and deliver tangible value to customers and stakeholders.

Innovation vs. Improvement

The distinction between innovation and mere improvement lies in their scope and impact.

ONE MORE THING: MY BONUS TO YOU!

Innovation is characterized by the ability to conceive, develop, implement, and scale new products, services, processes, and business models. It involves managing the entire journey from idea inception to tangible results, ensuring that creative concepts are effectively translated into real-world solutions. Furthermore, successful innovation requires discernment regarding the optimal timing and methods for implementation, thereby enabling new ideas to flourish within the organization.

The Importance of Action in Innovation

Innovation fundamentally requires proactive engagement. It involves identifying and cultivating growth opportunities, distinguishing itself from routine operational improvements. Substantive innovation has the potential to transform core business practices. To foster an innovative mindset, it is beneficial to incorporate strategies that enhance creativity and productivity—such as embedding mindfulness techniques throughout the workday. For guidance, consider consulting after reading my LinkedIn profile at www.linkedin.com/in/skipper.

Why Is Innovation Essential for Business Success?

Innovation enables organizations to adapt, remain competitive, and thrive amid rapidly changing environments. It is a primary driver of growth, facilitating:

- The identification of emerging opportunities
- Diversification of revenue streams
- Expansion into new markets

Research by the team at the Bison Group® indicates that organizations proficient in innovation achieve economic profits 4x greater than their peers. Notably, approximately 70% of leading organizations leverage innovation to enter or expand markets.

ONE MORE THING: MY BONUS TO YOU!

Beyond competitive advantage, innovation yields multiple operational and strategic benefits—these include increased resilience to external challenges such as economic volatility, enhanced adaptability, improved efficiency through process optimization and technology integration, and the attraction of top talent via engaging work environments. In saturated markets, innovation also strengthens brand recognition and customer trust by differentiating an organization from its competitors. Ultimately, innovation allows organizations to fulfil their mission of delivering meaningful value through distinctive products or services that address customer needs.

Types of Innovation in Business

To clarify the concept of innovation, it is useful to distinguish among four principal types relevant to businesses: product innovation, process innovation, business model innovation, and marketing innovation.

Product Innovation

Product innovation pertains to the development or enhancement of products designed to meet specific customer needs. Initiatives may range from adding features to existing offerings to creating entirely new products. Effective product innovation results from thorough research and can benefit both the organization (through increased sales and revenues) and consumers (through improved solutions). Notable examples include Tesla's electric vehicles and charging infrastructure, as well as Apple's iPhone.

Process Innovation

Process innovation focuses on optimizing operational procedures involved in the creation, delivery, and support of products or services.

ONE MORE THING: MY BONUS TO YOU!

By refining existing processes, organizations can achieve greater efficiency and cost savings. Areas of impact include supply chain management, manufacturing, sales, customer acquisition, and human resources. Henry Ford's introduction of the assembly line is a seminal example, substantially reducing labor and production time.

Business Model Innovation

Business model innovation addresses the manner in which products are offered and value is created. This form of innovation is often more complex and wide-ranging than product or process changes. It may result in enhanced revenue streams, improved cost structures, or elevated customer experiences. Business model innovation typically requires experimentation and a willingness to embrace risk. Amazon's transformation of global retail through rapid, diverse product delivery exemplifies this approach.

Marketing Innovation

Marketing innovation entails the adoption of novel strategies, techniques, and tools to improve promotional efforts and boost product or service sales. Such innovations frequently make use of advanced technologies, data analytics, and customer insights to design more effective campaigns and enrich customer engagement. Primary objectives include:

- Differentiating the organization's offerings from competitors
- Increasing brand awareness and customer engagement
- Driving sales and revenue growth

Examples of marketing innovation include leveraging social media platforms, implementing personalized advertising, and utilizing influencer marketing (Netflix or WhatsApp represents what happens when innovation goes beyond hypothetical).

ONE MORE THING: MY BONUS TO YOU!

How to Foster Innovation in Your Organization or Business

To foster a culture of innovation in your organization, try these steps:

- Encourage associates to share ideas and take risks.
- Regularly gather customer feedback through surveys or direct engagement.
- Allocate time and resources for research and brainstorming.
- Support skill development with training, workshops, or conferences.
- Provide technology and tools to aid innovation.
- Invite guest speakers to offer new perspectives and potential collaborations.
- Recognize innovative efforts with rewards like promotions or gift cards.

What Is Innovation in Business? A Key Driver of Growth

Innovation in business covers products, processes, marketing, and models, influencing multiple areas and enabling future progress. Like continual learning, it offers a competitive edge and boosts effectiveness. Want to innovate further? Follow ongoing “Beyond Today” issues published monthly to connect and pursue objectives and enhance your organization’s innovation. And don’t forget to request our Disruptive DifferentiationSM (DdS) Strategy Toolkit based solely on the insights by our team and Skipper at the Bison Group® using the AxeusSM Platform at the TriplicitySM Solutions.

Thank you.

This segment, “Beyond Today: Leading Digital Transformation to Impact Behaviors” is based solely on the insights published at the Bison Group® organization using the AxeusSM Platform at the TriplicitySM Solutions. Send us an email at support@thebisongroup.io to learn more.

2026–2030 BEYOND TODAY

Leading Digital Transformation
to Impact Behaviors
