Behavior Change is the Way Forward:
Improving Results in 2026 and Beyond

WELCOME

How to Be More Adaptable and Flexible as a Leader

Now more than ever before, leaders all over the world are facing change and complexity—continuous transformation **(evolution)** has presented us all with new challenges, new circumstances, and new uncertainties across the workplace. There's nothing new here, but “purpose” is being questioned when we haven't seen job growth in almost a year. As a result to political and technological outcomes, jobs are shrinking and disappearing; co-workers, teammates, and technology are changing quickly. And as the U.S workplace seem to be hurting more, organizations are setting new and different behavioral norms to adapt to challenges to overcome.

Adaptability is a requirement. Because change is constant and inevitable, leaders must be flexible to succeed. Our research confirms this imperative to adapt. Adaptability is about having ready access to a range of behaviors that enable leaders to shift and experiment as things change. Here's what adapting to change for success in the new age actually means: changing behaviors personally and professionally. This volume unpacks how behavior **MUST** be the focus forward regardless of circumstance. Let's see how.

ADAPTING TO CHANGING EXTERNAL PRESSURES FACING THE ORGANIZATION

Adapting to changing external pressures facing the organization requires flexibility and a different type of leadership that's stronger and greater. People have to wonder, "how do we be more adaptable and agile as a team for the organization and myself?" Now more than ever before, leaders all over the world are facing change and complexity—continuous transformation (evolution). The composable and modular (reusable) resources have presented us all with new challenges, new circumstances, and new uncertainties across the workplace. There's nothing new here, but "Engaged Purpose" is being questioned when we haven't seen job growth in almost a year. As a result to political and technological outcomes, jobs are shrinking and disappearing; co-workers, teammates, and technology are changing quickly. And as the U.S workplace seem to be hurting more, organizations are setting new and different behavioral norms to adapt to challenges to overcome. With this being the case, people in the workplace must use "Adaptability and LeaderShaping (Leadership 2.0)" to move aggressively forward regardless of circumstance.

The answer is variation and flexibility.

Adaptability is a requirement. Because change is constant and inevitable, leaders must be flexible to succeed. Our research confirms this imperative to adapt. Adaptability is about having ready access to a range of behaviors that enable leaders to shift and experiment as things change. Here's what adapting to change for success in the new age actually means: changing behaviors personally and professionally. This volume unpacks how behavior **MUST** be the focus forward regardless of circumstance.

ADAPTING TO CHANGING EXTERNAL PRESSURES FACING THE ORGANIZATION (CONT)

Responding to External Organizational Challenges

Business meets technology in action: see how digital tools and data power make real decisions. Immerse yourself in live challenges, interactive demos, and product showcases that bring strategy to life and turn ideas into impact. Here's what you'll take away. Readers will see how their skills can create impact and discover how their unique strengths improve value within multidisciplinary teams. They can experience how strategy and data come together to turn ideas into lasting results.

A strategic reset is a crucial initiative within the workplace. This series explores how contemporary leaders and cultures of excellence are reassessing organizational performance and developmental practices. It further examines strategies to enhance team effectiveness through improved dynamics and the integration of Artificial Intelligence (AI) to reshape team structures. The principal aim of this third volume is to encourage readers to value group-level flexibility, driven by human ingenuity. Such collective adaptability is indispensable, and we can collaborate to continuously strengthen it.

In our organization, a core principle states: "You have to put on your pants before you can put on a belt." In this context, structure serves as the foundational 'pants.' Many leaders and organizations may overlook this essential step, focusing on coaching teams without first conducting a thorough structural assessment. Without this foundation, even expert coaching efforts encounter significant obstacles. Comprehensive structural evaluation paves the way for meaningful behavioral change through "Adaptability and LeaderShaping (Leadership 2.0)," equipping individuals and organizations to effectively address changes, drive improvements, and overcome challenges across the following key disciplines. Let's see how.

ADJUSTING MANAGEMENT STYLES TO CHANGING SITUATIONS

As I move into the first segment, **“Adjusting Management Styles to Changing Situations,”** explore where innovation is heading and how it’s reshaping industries. Leaders miss this first step because they’re use to the norms regardless of if they must drastically improve to get better. The improvements will be offered over time to show a revised perspective window into the opportunities and challenges that will define the next decade. Why wait and follow trends? Set them yourself. Here’s what you’ll take away from this section. Gain perspective on what’s next and understand how AI is redefining strategy, operations, and the workforce, and what that means for leaders, innovators, and problem-solvers. Leave with a clearer view of where technology is heading and the role you can play.

Situational leadership using the **FAST**-Galloping GhostSM involves adjusting one’s leadership style to fit the needs and circumstances of each team member. This approach is built on the idea that different situations require different leadership methods, acknowledging that there is no one-size-fits-all style, which is perfect for this style and discipline. The **FAST**-Galloping GhostSM represents the next generation of leadership and is best used on the journey of next-level operations. The hard truth is most CEOs take years to learn how to deal with adversity and this is our genesis of influence and resilience. It adopts a mindset that fosters a culture of perseverance, continuous transformation and growth. It encounters navigating adversity is not just the inevitable, but essential for the development of strong, effective and disruptive leadership that faces uncertainty in the future.

This approach can be achieved with this discipline that’s so different. Professionals understand that it is not what people hear or think but what they do from **the four pillars** that leadership follows

ADJUSTING MANAGEMENT STYLES TO CHANGING SITUATIONS (CONT)

(The **FOUR** HorsemenSM System includes the Sustained Actions: **TIMESM Strategy** (features the actions that require leaders to perform gut wrenching analysis using a four-step recipe for success), **the Disruptive Modeling: 5-RingzSM Strategy** (helps to leverage and understand the action because it adjusts behaviors to tip them towards critical mass and make things turn into major differences), **the Incremental Improvements: FISHSM Strategy** (changes outcomes through gradual and continuous actions that are inevitable because they cause entities to evolve or adapt to internal and external shifts) and **the Radical Breakthroughs: PivotzSM Strategy** (achieves Better-Best results and outcomes by defining future-specific execution tactics that empowers people, uncovers new initiatives and objectives, and guides strategic actions to work where new normalcy “goes beyond best-practices” to compete in a more contested environment). The **FAST-Galloping GhostSM** includes EVERYTHING about Protagonists and is ONLY based on reaching the next-level. This action creates next-generation leadership to unleash an era of sustainable, inclusive growth in organizations that seek to outperform others regardless. The **FAST-Galloping GhostSM** focuses the actionable work on the Customer-facing Experience (CX) that reflects future-specific talent capabilities, organizational health, and financial performance in the Fourth Industrial Revolution (4IR) and beyond.

When faced with upheaval, the **FAST-Galloping GhostSM** is prepared for a massive shift and deal with “sustainability differentiation” to shape the associates, the leadership and the customer because this is their wheelhouse. To keep people safe, tremendously supportive, engaged and collaborative in all capacities, requires thought. It is just a group of leaders galvanizing around people, organizations and customers to get through the really tough times; it is a mission over self.

ADJUSTING MANAGEMENT STYLES TO CHANGING SITUATIONS (CONT)

Upheaval gets the entire team reoriented toward a new focus when led the right way for people to think, “I get why we’re doing this, and I want to be part of it.” People tend to have five sources of meaning that are intertwined: the customer, the team, the community, the organization and the shareholder. But upheaval brings forth “engaged purpose.” And technology underlies everything we’re talking about to fit into the overall strategy. Upheaval and sustainability differentiation limits a broad focus and culture where people and customers are proud to be a part of engaged purpose.

Finally, this journey is one that the **FAST**-Galloping GhostSM embraces for themselves, the team, the organization and the customer. It changes performance to Performance-driven Execution™ (PdE) that delivers Protagonistic viewpoints, attitudes and mindsets to transform operational differentiation, also known as “Disruptive Innovation,” that goes beyond best-practices. The **FAST**-Galloping GhostSM is a part of a system that journeys the next-level of operations and sustainability throughout industries, from ALL types, with a credible endgame in mind that’s understood from the start.

Now that I have exposed you to a different style of leadership that can easily be considered Leadership 2.0 to adjust the organization’s management style for changing situations, it’s important to understand that situations will and always will change. Unlike the **FAST**-Galloping that’s situational, the style adapts to associate readiness, transformational leadership to focus on creating lasting change throughout time. Now I move into the second action and behavior to inspire change through vision and passion. This focuses on “Content, Process, Product, and the Learning Environment.”

ACCEPTING DIFFERENTIATION AS A POSITIVE TO REVISE PLANS AS NECESSARY

It's time to focus on one of the more important segments in the series, the "work." Accepting differentiation as a positive to revise plans as necessary is important because everything starts as a mindset. The actual work is where the real value is. It starts with a question: "Why differentiate?"

This is a question that everyone in organizations should be asking. At its foundational level, differentiation is simply good teaching and when people learn the truth behind differentiation, they smartly revise their original plans. Here's what you'll take away. Extensive research and years of workplace best-practices indicate that adapting instruction to individual skill levels, learning preferences, and language abilities enhances outcomes and results. By employing varied strategies, adjusting the level of complexity, and offering multiple examples, leaders provide diverse entry points to engage with the material. Differentiated plans thus improve our capacity to effectively address the needs of all stakeholders. The benefits of differentiation are well-documented, but everyone must know the different types. **First, there's Content:**

- **What it is:** the information that stakeholders are learning and how they access it.
- **Why it matters:** if stakeholders cannot access the material, they will not be able to make progress toward the standards.
- **How to differentiate:** stakeholders should offer information in different formats (e.g., read, watch, listen and explore visuals) and provide texts and tasks at varying levels of rigor and complexity.
- **LeaderShaping:** use the Leadership 2.0 to provide tailored information for small teams, while the perspective provides additional opportunities to engage with concepts and skillsets using the Triplicity FormatSM Strategy. The controller of the narrative gets to say anything for the masses to think a certain way, so content matters to move forward.

ACCEPTING DIFFERENTIATION AS A POSITIVE TO REVISE PLANS AS NECESSARY (CONT)

Next, there's Process:

- **What it is:** the activities stakeholders engage in to understand new information or make meaning.
- **Why it matters:** stakeholders process information in different ways. Some thrive on teams, while others prefer to work alone. Some think Better-Best internally, while others need to talk things and ideas out. This variation means that a single strategy for supporting process and meaning makes it unlikely to work for all learners across the workplace.
- **How to differentiate:** stakeholders should offer different graphic organizers, use modeling and think routines to provide “would you rather” options for meaning making in the workplace. Everyone must have a say and belonging in the process.
- **LeaderShaping:** to move forward, design Leadership 2.0 to provide dedication to the approach of purpose-driven execution but allow stakeholders to decide how they want to engage with the task (e.g., create a written analogy or engage in small team discussion in the workplace).

Then there's Product:

- **What it is:** the assignments and projects that ask stakeholders to show what they have learned.
- **Why it matters:** choice in products allows stakeholders to demonstrate understanding in ways that fit their preferences and strengths, providing people and instructors with a more accurate insight into and evidence of their skillset learning in the workplace.
- **How to differentiate:** stakeholders should provide a choice of options (e.g., essay, video presentation, artistic representation) and use asset-based rubrics to clearly communicate what success looks like at different levels of proficiency in the composable and modular (reusable) resources and workplace.

ACCEPTING DIFFERENTIATION AS A POSITIVE TO REVISE PLANS AS NECESSARY (CONT)

- **LeaderShaping:** to move forward, people must use the teacher-led approach to provide feedback on products in progress, adjusting the level of support and scaffolding to each stakeholder's specific needs across the workplace.

Lastly, there's the Learning Environment:

- **What it is:** The physical and/or online space where learning is happening.
- **Why it matters:** A flexible learning environment helps students focus and work productively.
- **How to differentiate:** Offer varied seating arrangements (e.g., rows along the wall for individual work and grouped tables for collaboration), learning zones for quiet and conversational activities, and options for more tactile offline tasks versus online digital work.
- **LeaderShaping:** to move forward, people must balance quiet, independent work that aligns with the organization's Future-Picture with collaborative, conversational assignments that include a mix of online and offline tasks across the workplace. They must also use human-machine-technology in ways that don't feel unnatural for stakeholders to advance without being told to (mindset).

Don't feel like you have to differentiate all four areas at once. Start with one, build a routine that works, and expand from there, while understanding the graduation of leadership to Leadership 2.0. Content, Process, Product and learning the environment across the organization and the workplace matters and benefits greatly from the many movements. Now I move into the third action and behavior; "consideration." When I talk about other people's feelings, it makes me think about relationships. Being considerate means paying attention to another person's needs or emotions. This quality is essential because it helps people develop empathy and trust, leading to stronger bonds and where abilities fit in.

THE CONSIDERATION OF OTHER PEOPLE'S CONCERNS

As I journey into “consideration” of other people’s concerns in this third section, healthy, happy, and ethical decision-making in relationships must be created throughout the environment. While connections and exchanges are important, meaningful conversations truly shape the experience. People encounter peers from many backgrounds—consultants, strategists, technologists, and recruiters—who can help them see where their abilities fit in. Much insight from discussions with others will create formal happenings. **Here’s what awaits: lasting relationships and purposeful network growth.** Engage with people who challenge your thinking, inspire new ideas, and broaden your perspective. The conversations you begin here may evolve into mentorships, collaborations, and even lifelong communities away from the workplace.

In today’s competitive business environment, relationship concerns and purposeful network growth serves as more than just a list of acquaintances—it functions as a catalyst for organizational advancement. One of my associates pointed out “The value of market contacts is worth more than the sum of its parts,” and that value grows significantly with the size of the team/s in the workplace. Nevertheless, without a valuable culture and professionalism, other people’s concerns may devolve into a succession of costly engagements, missed opportunities, or even cause inadvertent irritation with teams. To cultivate an effective and mutually beneficial relationships, it is advisable to adhere to four fundamental principles that mitigate common missteps and convert connections into lasting business relationships. Here are the four “Behaviors of Concerns” in the workplace:

1. Effective Communications: The Heptagon FrameworkSM
2. Psychological Safety (FEAR)
3. Establish a Distinct Professional Identity
4. Value the Future-Picture Objectives

THE CONSIDERATION OF OTHER PEOPLE'S CONCERNS (CONT)

Effective Communications: The Heptagon FrameworkSM

When you think about other people's concerns in the workplace, you can avoid many issues by communicating strongly in every area. The Heptagon FrameworkSM is all about making communication better between parties using different frameworks to improve habitual listening and reacting skills that resolve issues and increases Emotional Intelligence (EQ). It understands and manages one's own emotions, as well as the emotions of others and uses key objectives, workable solutions, strong decision-making, structured agendas, problem-solving, conflict management, hard discussions, and feedback that focus on generosity and connection with purpose.

Psychological Safety (FEAR)

To deal with other people's concerns, face **FEAR** head-on, which means "**Face Everything and Respond (Relax).**" A targeted approach is more effective than a broad one. In relationship building, quality matters more than quantity.

Establish a Distinct Professional Identity

Individuals are more inclined to engage with you when they have a clear understanding of your expertise, offerings, and distinguishing qualities. Clarity fosters trust and recognition.

Value the Future-Picture Objectives

To deal with other people's concerns, offering value first and build from there. Caring shows real concern. Offering insight, showing up with a give-first mindset sets the foundation for mutual success and trust.

In the end, the objective of concern isn't just to grow build a web of trust and opportunity, the four "Behaviors of Concerns" focuses on quality to become one of your most powerful tools in relationships.

IT'S ONLY A JOB; IT'S NOT YOUR ENTIRE LIFE

As I move into this fourth section that I label one of the key focuses, gain practical experience by engaging in the collaborative work progressive teams. Work alongside others and subject matter experts (SMEs) on small teams to identify challenges, evaluate solutions, and deliver recommendations. The environment is dynamic, the problems are substantive, and learning occurs through hands-on involvement. Participants will become acquainted with flexibility and structured problem-solving methodologies—developing skills in breaking down complex issues, rigorously evaluating ideas, and converting insights into actionable strategies. People must understand that “it’s only a job; it’s not your entire life!” Leave with more than you walked in with and understand that people are behind you. Leave the environment better when you are introduced with practical tools applicable to real-world scenarios.

THE TECHNOLOGICAL REVOLUTION IS MOVING FAST

Rapid technological change encourages creativity, curiosity, and collaborative development. Rather than fearing uncertainty, it is important to focus on the exploration, evaluation, and advancement of innovative concepts—that ultimately have the opportunity to bite hard. Leveraging emerging technologies alongside human-centered design helps reduce obstacles and addresses practical challenges. By applying innovation with intentionality, strive to generate measurable impact within the environment.

INNOVATION IS POWERFUL WHEN APPLIED WITH ENGAGED PURPOSE. The accelerating pace of behavioral and technological progress holds significant potential when directed thoughtfully. For professionals, AI and other advancements are streamlining processes, enhancing data quality, and facilitating the prediction of actions and behaviors. Adapting with technology that prioritizes human-centered science and ensures reliable outcomes contributes to meaningful progress.

THE TECHNOLOGICAL REVOLUTION IS MOVING FAST (CONT)

When innovation balances respect for both individuals and information that's accurate in the workplace, it drives substantial improvement. We are on the threshold of a technological revolution that will significantly transform the ways in which we live, work, and interact. The magnitude, breadth, and complexity of this transformation are unparalleled in human history. As of 2026, the specific trajectory of these changes remains uncertain; however, it is evident that an integrated and comprehensive response is required. This response must involve all stakeholders—including the public and private sectors, academia, and civil society.

The first pivot of 4IR utilized water and steam power to mechanize production, the second leveraged electricity for mass production, and the third relied on electronics and information technology for automation. Currently, 4IR builds upon its predecessor—the ongoing digital revolution—by merging technologies in a manner that blurs boundaries among the physical, digital, and biological realms, characterized by unprecedented speed, scale, and systemic impact.

Shaping Today, Tomorrow and Beyond Expectations

Technological advancement and the accompanying disruption are not external forces beyond human influence. It is the collective responsibility of individuals—as citizens, consumers, and investors—to guide their development. We must recognize and embrace our capacity to shape the fourth industrial revolution, directing it toward objectives that align with our shared goals and values (such as OKRs and KPIs). Achieving this requires the creation of a comprehensive, globally-informed understanding of how technology affects and reshapes our economic, social, cultural, and personal environments. Rarely has there been a time of such promise paired with significant risk. However, many decision-makers remain constrained by traditional perspectives or preoccupied with pressing crises, which can hinder strategic thinking regarding innovation and disruption.

THE TECHNOLOGICAL REVOLUTION IS MOVING FAST (CONT)

Ultimately, our focus should be on people and values, NOT machines. Our task is to create a tomorrow that benefits everyone by prioritizing human development and empowerment. While the Fourth Industrial Revolution (4IR) presents potential risks—such as excessive automation that may diminish human essence—it also offers the possibility to elevate humanity through creativity, empathy, and stewardship. It is essential that we collectively ensure these positive outcomes prevail to realize “Thought Leadership 2.0” perspective: the “current (the future), the gaps (the Event Horizon) and the desired outcome (the Future-Picture),” which is critically important.

Move Fast, but Play by the Rules: the Vision for AI Dominance

AI is as transformative as the steam engine, electricity and the internet. But despite all its potential, people cannot allow the new technology to “get out of control.” We must act early and decisively, anticipating and preventing problems with prudence and caution. This statement highlights a tension shaping the nations and global technology industry. People making decisions must decide and drive economic growth responsibly over the next decade (I know that’s hard). At the same time, it cannot allow new technology to destabilize societies and the control over it. The result is that the government is pressuring leaders and organizations to do two things at once: move fast so that business overtakes international rivals and is at the forefront of technological change, while complying with an increasingly complex set of rules (every country has its own).

Since Chinese startup DeepSeek launched its popular AI model in late 2024, followed by a series of high-performance launches from Alibaba and Zhipu, local governments across the country have rushed to proclaim that they are using AI in every part of their economies, from hospital wards to industrial production lines.

THE TECHNOLOGICAL REVOLUTION IS MOVING FAST (CONT)

“Because economic growth is so important to the legitimacy of the technology, we want to ensure that AI rules are not so burdensome that they stifle growth and drive away investment,” say our associates at the Bison Group® organization. It is greatly important to move fast while playing by the rules to achieve dominance with AI and supporting technology.

More to come.

WHY IT ALL MATTERS?

The Future of Leadership 2.0: Are You Ready?

Leadership 2.0 is not focused on preserving existing practices; rather, it emphasizes proactively adapting to change, fostering resilience, and developing organizations capable of succeeding in uncertain environments. People who incorporate coaching and mentoring, invest in Leadership 2.0 development, and encourage a culture of innovation and adaptability are instrumental in shaping the “Thought Leadership” perspective: the “current (the future), the gaps (the Event Horizon) and the desired outcome (the Future-Picture),” which is critically important. The evolution of Leadership 2.0 necessitates corresponding growth among individuals within organizations in the workplace.

New Horizon: Lead What's Next in LeaderShaping and AI

In today's improving and changing business environment, managing public perception is more important than ever. The new horizon helps individuals, organizations and companies develop and build (maintain) “positive product development that solves a real market need by offering a different solution!” Want value? Want to offer a competitive and strategic advantage that's scalable and growth friendly? Want a solution that offers profitability and is sustainable for the long-term? That's what this service does, and it's known as **“the TriplicistSM Service.”** It incorporates all of the actions and behaviors (Adaptability and LeaderShaping (Leadership 2.0)) to this point and crafts a compelling visual with witty brand value, while communicating low cost that resonates with the audience. The TriplicistSM Service is unique because it uses copywriting, graphic design, web and App-development, SEO (Search Engine Optimization), GEO (Geographic Optimization) and AEO (Answer Engine Optimization) services—all in one package, FAST. Customers today seek answers, not links. The TriplicistSM Service helps brands adapt to the AI-driven customer journey to be a part of the answer.

WHY IT ALL MATTERS (CONT)?...

Lastly, to stay relevant and disruptive in the marketplace, the TriplicistSM Service also helps to evolve ideas. This service isn't just offering another service in the business community; it's expanding on it. Focus on intent, build your strategy around AI-driven experiences, and double down on authority, experience, and trust. This service breaks down silos by placing the team at the heart of the situation; it's collaboration as the fuel of innovation. The TriplicistSM Service foster partnerships between departments, inspires new perspectives and helps to avoid narrow thinking. Team players open communication and collaboration across different fields to lead to innovative solutions. A new horizon awaits and you'll wish for you had done it sooner.

Conclusion

A Strategic Reset is essential in the workplace: this series examines how current leaders and cultures of excellence are reevaluating organizational performance and development. It also addresses methods for strengthening teams through improved dynamics and leveraging AI to redefine team structures. My key objective for readers of this third volume is to foster an appreciation for flexibility enabled by human ingenuity at the group level. This collective adaptability is critical, and together we can find ways to enhance it further.

Within our organization, there is a guiding principle; "You have to put on your pants before you can wear a belt." Here, structure represents the foundational 'pants.' Many leaders and organizations neglect this step, attempting to coach teams before thoroughly assessing their structure. Without this foundation, even the most skilled coaching efforts face significant challenges.

WHY IT ALL MATTERS (CONT)?...

Thoroughly assessing the structure unpacks behavioral change as the way forward using “Adaptability and LeaderShaping (Leadership 2.0)” because it enables individuals and organizations to effectively respond to changes, improvements and challenges to offer real solutions from five disciplines:

1. **Enhance Resilience:** recover from setbacks and learn from experiences.
2. **Encourage Innovation that Disrupts:** improve or change as a leader in your industry.
3. **Improve Productivity:** reduce costs while increasing outcomes and results to adapt to the new.
4. **Facilitate Personal and Professional Growth:** expand capacity to handle more with ease and quality.
5. **Be Different but Valuable:** standout in the pack while generating greater value to the masses.

In closing, Adaptability and LeaderShaping (Leadership 2.0) offers a way of assessing the organization’s culture as the behaviors that must not go overlooked. They’re not buzzwords used across organizations or in personal thoughts. Instead, there are crucial skills that can make the difference between surviving and thriving in an ever-changing world that won’t stop. Research shows that “influence the right way” is getting harder where people have to think for themselves to achieve excellence. By developing this trait and these people, it’s important to make ‘engaged purpose and character’ the engine that points the compass in the RIGHT direction—and “Adaptability with LeaderShaping (Leadership 2.0)” is the way to go! At their best, people in organizations are setting bold visions and galvanizing their teams to deliver. Again, it’s no easy task but to succeed, excellent leadership with self, others and the organization point the compass to exceed expectations, no matter what challenges may come. Therefore, welcome new experiences, keep an open mind, and see how you develop in surprising ways!

This third volume of Beyond Today, *“Behavior Change is the Way Forward: Improving Results in 2026 and Beyond,”* is based solely on the insights published at the Bison Group® organization using the AxeusSM Platform at the TriplicitySM Solutions.
